## OUTLINE

- Introduction
- Latin Squares
- Types of Latin Squares
- Permutations of Latin Squares
- Sets of Orthogonal Latin Squares
-r-orthogonality
$-r_{t}$-orthogonality
- Our Projects
- References
- Acknowledgements

## INTRODUCTION

-Why study latin squares?
-Applications
-Puzzles
-It's fun!

## LATIN SQUARES

- A latin square of order $n$ is an $n \times n$ matrix containing $n$ distinct symbols such that each symbol appears in each row and column exactly once. The symbols are usually denoted by $0,1, \ldots, n-1$.
- Example. Latin square of order 4:

| 0 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 |

$\square$ Theorem 1. There is a latin square of order $n$ for each $n \geq 1$.

Find the latin square:

| 0 | 3 | 3 | 1 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 2 |
| 2 | 2 | 1 | 3 |
| 2 | 0 | 0 | 1 |

| 1 | 0 | 2 | 2 |
| :--- | :--- | :--- | :--- |
| 0 | 2 | 0 | 3 |
| 1 | 2 | 3 | 0 |
| 3 | 1 | 1 | 1 |

| 3 | 1 | 3 | 2 |
| :--- | :--- | :--- | :--- |
| 0 | 3 | 2 | 0 |
| 1 | 2 | 0 | 3 |
| 2 | 3 | 2 | 1 |

| 2 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 0 | 0 | 3 | 0 |
| 3 | 1 | 2 | 2 |
| 1 | 3 | 0 | 1 |

| 3 | 2 | 2 | 0 |
| :--- | :--- | :--- | :--- |
| 2 | 1 | 0 | 3 |
| 2 | 0 | 3 | 1 |
| 0 | 3 | 1 | 3 |

| 0 | 1 | 3 | 2 |
| :--- | :--- | :--- | :--- |
| 1 | 0 | 3 | 2 |
| 3 | 2 | 1 | 1 |
| 3 | 0 | 2 | 2 |

| 1 | 0 | 2 | 2 |
| :--- | :--- | :--- | :--- |
| 2 | 2 | 3 | 0 |
| 3 | 1 | 2 | 3 |
| 0 | 3 | 0 | 1 |

| 0 | 1 | 3 | 0 |
| :--- | :--- | :--- | :--- |
| 1 | 3 | 1 | 3 |
| 3 | 1 | 0 | 2 |
| 0 | 3 | 2 | 1 |

| 2 | 3 | 0 | 1 |
| :--- | :--- | :--- | :--- |
| 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 |
| 3 | 0 | 1 | 2 |

| 0 | 3 | 3 | 1 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 2 |
| 2 | 2 | 1 | 3 |
| 2 | 0 | 0 | 1 |

| 1 | 0 | 2 | 2 |
| :--- | :--- | :--- | :--- |
| 0 | 2 | 0 | 3 |
| 1 | 2 | 3 | 0 |
| 3 | 1 | 1 | 1 |

| 3 | 1 | 3 | 2 |
| :--- | :--- | :--- | :--- |
| 0 | 3 | 2 | 0 |
| 1 | 2 | 0 | 3 |
| 2 | 3 | 2 | 1 |

| 2 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 0 | 0 | 3 | 0 |
| 3 | 1 | 2 | 2 |
| 1 | 3 | 0 | 1 |

| 3 | 2 | 2 | 0 |
| :--- | :--- | :--- | :--- |
| 2 | 1 | 0 | 3 |

| 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 |
| 3 | 0 | 1 | 2 |

## Computational Problem

A central problem in the theory of latin squares is to determine how many latin squares of each size exist.

| $\boldsymbol{n}$ | \#LS |
| :---: | :---: |
| 1 | 1 |
| 2 | 2 |
| 3 | 12 |
| 4 | 576 |
| 5 | 161,280 |
| 6 | $812,851,200$ |
| 7 | $61,479,419,904,000$ |
| 8 | $108,776,032,459,082,956,800$ |
| 9 | $5,524,751,496,156,892,842,531,225,600$ |
| 10 | $9,982,437,658,213,039,871,725,064,756,920,320,000$ |
| 11 | $776,966,836,171,770,144,107,444,346,734,230,682,311,065,600,000$ |

Taken from N. J. A. Sloane, A002860, On-Line Encyclopedia of Integer Sequences (1996-2008) http://www.research.att.com/~njas/sequences/A002860

| $n$ | \#LS |
| :---: | :---: |
| 1 | 1 |
| 2 | 2 |
| 3 | 12 |
| 4 | 576 |
| 5 |  |
| 6 |  |
| 7 |  |
| 8 | 100,110,05<,4J9,002,950,000 |
| 9 | 5,524,751,496,156,892,842,531,225,600 |
| 10 | 9,982,437,658,213,039,871,725,064,756,920,320,000 |
| 11 | 776,966,836,171,770,144,107,444,346,734,230,682,311,065,600,000 |

## TYPES OF LATIN SQUARES

- A latin square of order $n$ is said to be reduced if its first row and first column are in the standard order $0,1, \ldots, n-1$.
- Example. This is an example of a reduced latin square of order 4:

| 0 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 |

| $\boldsymbol{n}$ | \#RLS |
| :---: | :---: |
| 1 | 1 |
| 2 | 1 |
| 3 | 1 |
| 4 | 4 |
| 5 | 56 |
| 6 | 9,408 |
| 7 | $16,942,080$ |
| 8 | $5.35 \times 10^{11}$ |
| 9 | $3.78 \times 10^{17}$ |
| 10 | $7.58 \times 10^{24}$ |
| 11 | $5.36 \times 10^{33}$ |

Taken from N. J. A. Sloane, A000315, On-Line Encyclopedia of Integer Sequences (1996-2008) http://www.research.att.com/~njas/sequences/A000315.

| $n$ | \#RLS |
| :---: | :---: |
| 1 | 1 |
| 2 | 1 |
| 3 | 1 |
| 4 | 4 |
| $\triangleq$ | 53 |
| 9 | $3.78 \times 10^{17}$ |
| 10 | $7.58 \times 10^{24}$ |
| 11 | $5.36 \times 10^{33}$ |

Taken from N. J. A. Sloane, A000315, On-Line Encyclopedia of Integer Sequences (1996-2008) http://www.research.att.com/~njas/sequences/A000315.

## TYPES OF LATIN SQUARES

- Let $L_{n}$ denote the number of distinct latin squares of order $n$ and let $I_{n}$ denote the number of distinct reduced latin squares of order n :

Theorem 2. For any $n \geq 2, L_{n}=n!(n-1)!I_{n}$
Example:
For $n=5, l_{5}=56$ and you will get $L_{5}=(5!)(4!)(56)=161,280$

## TYPES OF LATIN SQUARES

- A latin square of order $n$ is said to be semireduced if its first row is in the standard order.
- Example. This is an example of a semi-reduced latin square of order 5:

| 0 | 1 | 2 | 3 | 4 |
| :--- | :--- | :--- | :--- | :--- |
| 2 | 4 | 1 | 0 | 3 |
| 3 | 2 | 0 | 4 | 1 |
| 4 | 0 | 3 | 1 | 2 |
| 1 | 3 | 4 | 2 | 0 |

## PERMUTATIONS OF LATIN SQUARES

- Permutations of latin squares:

1. column permutation
2. row permutation
3. relabeling

- A permutation of a set is an arrangement of its elements in a certain order.
-The number of permutations of $n$ elements is: $n!=n(n-1)(n-2)(n-3) \ldots(3)(2)(1)$.

## PERMUTATIONS OF LATIN SQUARES

## $\square$ Column permutation

| 0 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 |

DRow permutation

| 0 | 1 | 3 | 2 |
| :--- | :--- | :--- | :--- |
| 1 | 2 | 0 | 3 |
| 2 | 3 | 1 | 0 |
| 3 | 0 | 2 | 1 |

$\checkmark \quad$| 0 | 1 | 3 | 2 |
| :---: | :---: | :---: | :---: |
| 2 | 3 | 1 | 0 |
| 1 | 2 | 0 | 3 |
| 3 | 0 | 2 | 1 |

## PERMUTATIONS OF LATIN SQUARES

$\square$ Relabeling:

$$
\begin{aligned}
& 2 \rightarrow 0 \\
& 0 \rightarrow 1 \\
& 1 \rightarrow 2 \\
& 3 \rightarrow 3
\end{aligned}
$$

| 2 | 0 | 1 | 3 |
| :--- | :--- | :--- | :--- |
| 3 | 1 | 2 | 0 |
| 0 | 2 | 3 | 1 |
| 1 | 3 | 0 | 2 |

## PERMUTATIONS OF LATIN SQUARES

$\square$ Relabeling:

## PERMUTATIONS OF LATIN SQUARES

 Example. All the latin squares of order 3:Theorem 2. For any $n \geq 2, L_{n}=n!(n-1)!I_{n}$

| 1 |  |  | Interchange the $n$ columns | 2 |  |  | 3 |  |  | 4 |  |  | 5 |  |  | 6 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 |  | 0 | 2 | 1 | 1 | 2 | 0 | 1 | 0 | 2 | 2 | 0 | 1 | 2 | 1 | 0 |
| 1 | 2 | 0 |  | 1 | 0 | 2 | 2 | 0 | 1 | 2 | 1 | 0 | 0 | 1 | 2 | 0 | 2 | 1 |
| 2 | 0 | 1 |  | 2 | 1 | 0 | 0 | 1 | 2 | 0 | 2 | 1 | 1 | 2 | 0 | 1 | 0 | 2 |

Interchange the last $n-1$ rows

| 7 |  |  |
| :--- | :--- | :--- |
| 0 | 1 | 2 |
| 2 | 0 | 1 |
| 1 | 2 | 0 |

| 8 |  |  |
| :--- | :--- | :--- |
| 0 | 2 | 1 |
| 2 | 1 | 0 |
| 1 | 0 | 2 |

| 9 |  |  |
| :--- | :--- | :--- |
| 1 | 0 | 2 |
| 0 | 2 | 1 |
| 2 | 1 | 0 |

| 10 |  |  |
| :--- | :--- | :--- |
| 1 | 2 | 0 |
| 0 | 1 | 2 |
| 2 | 0 | 1 |

| 11 |  |  |
| :--- | :--- | :--- |
| 2 | 0 | 1 |
| 1 | 2 | 0 |
| 0 | 1 | 2 |

| 12 |  |  |
| :--- | :--- | :--- |
| 2 | 1 | 0 |
| 0 | 2 | 1 |
| 1 | 0 | 2 |

You get the twelve latin squares of order 3

| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 |
| 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 |
| 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |
| 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 | 1 | 2 | 0 |  |
|  | SETS OF ORTHOGONAL LATIN SQUARES |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## SUPERIMPOSING LATIN SQUARES

- Given two latin squares of the same size we can superimpose them, that is, we can place or lay one latin square over the other to create a square of ordered pairs.
- Example.

| 0 | 1 | 2 |
| :--- | :--- | :--- |
| 1 | 2 | 0 |
| 2 | 0 | 1 |
| $L S_{1}$ |  |  |,$~$| 0 | 1 | 2 |
| :--- | :--- | :--- |
| 2 | 0 | 1 |
| 1 | 2 | 0 |
| $L S_{2}$ |  |  |

| $(0,0)$ | $(1,1)$ | $(2,2)$ |
| :---: | :---: | :---: |
| $(1,2)$ | $(2,0)$ | $(0,1)$ |
| $(2,1)$ | $(0,2)$ | $(1,0)$ |
| $S\left(L S_{1}, L S_{2}\right)$ |  |  |

## $r$-orthogonality

- $r=P\left(\mathrm{LS}_{1}, \mathrm{LS}_{2}\right)$ is the number of distinct ordered pairs you get when you superimpose $\mathrm{LS}_{1}$ and $\mathrm{LS}_{2}$.
- $\mathrm{LS}_{1}$ and $\mathrm{LS}_{2}$ are said to be $r$-orthogonal if you get $r$ distinct ordered pairs when you superimpose them.

## $r$-orthogonality

- Example. A pair of 8-orthogonal latin squares of order 4:

## $r$-orthogonality

- Example. A pair of 8-orthogonal latin squares of order 4:

| 0 | 1 | 2 | 3 | 0 | 1 | 2 | 3 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 2 | 3 | 0 | 3 | 0 | 1 | 2 |  |  |  |  |
| 2 | 3 | 0 | $1 \checkmark$ | 2 | 3 | 0 | 1 |  |  |  |  |
| 3 | 0 | 1 | 2 |  | 2 | 3 | 0 |  |  |  |  |
|  |  |  |  |  |  |  |  | $(0,0)$ | $(1,1)$ | $(2,2)$ | $(3,3)$ |
|  |  |  |  |  |  |  |  | $(1,3)$ | $(2,0)$ | $(3,1)$ | $(0,2)$ |
|  |  |  |  |  |  |  |  | $(2,2)$ | $(3,3)$ | $(0,0)$ | $(1,1)$ |
|  | Note that $P\left(\mathrm{LS}_{1}, \mathrm{LS}_{2}\right)=P\left(\mathrm{LS}_{2}, \mathrm{LS}_{1}\right)$. |  |  |  |  |  |  |  |  |  |  |

## Orthogonal Latin Squares

- Two latin squares of order $n$ are orthogonal if $r=n^{2}$.
- Pair of orthogonal latin squares of order 3:

| 0 | 1 | 2 |
| :--- | :--- | :--- |
| 1 | 2 | 0 |
| 2 | 0 | 1 |
| $L S_{1}$ |  |  |

| 0 | 1 | 2 |
| :--- | :--- | :--- |
| 2 | 0 | 1 |
| 1 | 2 | 0 |
| $L S_{2}$ |  |  |

$\checkmark \quad$| $(0,0)$ | $(1,1)$ | $(2,2)$ |
| :---: | :---: | :---: |
| $(1,2)$ | $(2,0)$ | $(0,1)$ |
| $(2,1)$ | $(0,2)$ | $(1,0)$ |
| $S\left(L S_{1}, L S_{2}\right)$ |  |  |

## $r$-orthogonality

- The spectrum (for $r$-orthogonality) is the set of all the possible values of $r$.
- The frequency (for $r$-orthogonality) is the number of pairs of latin squares of order $n$ that are $r$-orthogonal.

## $r$-orthogonality

- Example:

For latin squares of order 4 the spectrum is $\{4,6,8,9,12,16\}$ and the frequency for those values of $r$ is

- Example:

For latin squares of order 6 the spectrum is $\{6,8,9,10,11,12$, $13,14,15,16,17,18,19,20,21$, $22,23,24,25,26,27,28,29,30$, $31,32,34\}$

| $r$ | $f$ |
| :---: | :---: |
| 4 | 4 |
| 5 | 0 |
| 6 | 12 |
| 7 | 0 |
| 8 | 6 |
| 9 | 24 |
| 10 | 0 |
| 11 | 0 |
| 12 | 48 |
| 13 | 0 |
| 14 | 0 |
| 15 | 0 |
| 16 | 2 |

## $r$-orthogonality

- Theorem 3: For a positive integer $n$, a pair of $r$-orthogonal latin squares of order $n$, exists if and only if $r \in\left\{n, n^{2}\right\}$ or $n+2 \leq r \leq n^{2}+2$, except when
$-n=2$ and $r=4 ;$
$-n=3$ and $r \in\{5,6,7\} ;$
$-n=4$ and $r \in\{7,10,11,13,14\} ;$
$-n=5$ and $r \in\{8,9,20,22,23\} ;$
$-n=6$ and $r \in\{33,36\}$.

## $r$-orthogonality

- Example:

For latin squares of order 4

| $r$ | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $f$ | $*$ | 0 | $*$ | 0 | $*$ | $*$ | 0 | 0 | $*$ | 0 | 0 | 0 | $*$ |

## $r$-orthogonality

- Proposition: There exist a pair of latin squares of order $n$ that are $r$-orthogonal if and only if there exist a reduced latin square of order $n$ and a semi-reduced latin square of order $n$ that are $r$-orthogonal.
-Example: The number of pairs of latin squares of order 5 is $L_{5} \times L_{5}=26,011,238,400$. The number of pairs of reduced latin squares and semi-reduced latin squares is $I_{5} \times s I_{5}=75,264$.

Note: $\boldsymbol{s} \boldsymbol{I}_{\boldsymbol{n}}$ is the number of distinct semi-reduced latin squares of order $n$

## $r_{t}$-orthogonality

- Let $\left\{\mathrm{LS}_{1}, \ldots, \mathrm{LS}_{t}\right\}$ be a set of $t \geq 2$ latin squares. Then, $r_{t}$ is the sum of all the $r=P\left(\mathrm{LS}_{i}, \mathrm{LS}_{j}\right)$, with $1 \leq \mathrm{i}, \mathrm{j} \leq \mathrm{t}$ and $\mathrm{i} \neq \mathrm{j}$.

$$
r_{t}=\sum_{i=1}^{t-1} \sum_{j=i}^{t-1} P\left(L S_{i}, L S_{j+1}\right)
$$

- Example. Let $\left\{\mathrm{LS}_{1}, \mathrm{LS}_{2}, \mathrm{LS}_{3}\right\}$ be a set of three latin squares of order $n$ :

$$
r_{3}=P\left(\mathrm{LS}_{1}, \mathrm{LS}_{2}\right)+P\left(\mathrm{LS}_{1}, \mathrm{LS}_{3}\right)+P\left(\mathrm{LS}_{2}, \mathrm{LS}_{3}\right)
$$

## $r_{t}$-orthogonality

- Example: Here we have a set of three latin squares of order 4 with $r_{3}=9+12+9=30$

| 0 | 1 | 2 | 3 | 0 | 1 | 2 | 0 | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 3 | 0 | 2 | 1 | 2 | 3 | 2 | 3 | 0 | 1 |
| 2 | 0 | 3 | 1 | 2 | 3 | 0 | 1 | 2 | 3 | 0 |
| 3 | 2 | 1 | 0 | 3 | 0 | 1 | 3 | 0 | 1 | 2 |

## $r_{t}$-orthogonality

- The spectrum (for $r_{t}$-orthogonality) is the set of all the possible values of $r$.
- The frequency (for $r_{t}$-orthogonality) is the number of sets of $t$ latin squares of order $n$ that have an $r_{t}$-orthogonality, and it is denoted by $h_{r_{t}}$.

## Mutually Orthogonal Latin Squares

- A collection $\left\{\mathrm{LS}_{1}, \mathrm{LS}_{2}, \mathrm{LS}_{3}, \ldots, \mathrm{LS}_{\mathrm{t}}\right\}$ of $t \geq 2$ latin squares of order $n$ is said to be mutually orthogonal if every pair of distinct latin squares in the collection is orthogonal.
- Example. Let $\left\{\mathrm{LS}_{1}, \mathrm{LS}_{2}, \mathrm{LS}_{3}\right\}$ be a set of 3 latin squares of order $n$.

This set is orthogonal if $P\left(\mathrm{LS}_{1}, \mathrm{LS}_{2}\right)=n^{2}$, $P\left(\mathrm{LS}_{2}, \mathrm{LS}_{3}\right)=n^{2}$ and $P\left(\mathrm{LS}_{1}, \mathrm{LS}_{3}\right)=n^{2}$.

## Mutually Orthogonal Latin Squares

- Example: Here we have a set of orthogonal latin squares of order 4:

| 0 | 1 | 2 | 3 | 0 | 2 | 3 | 1 | 0 | 3 | 1 | 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0 | , | 2 | 1 | 3 | 2 | 0 | 1 | 2 | 0 | 3 |
| 2 | 3 | 0 | 1 | 2 | 0 | 1 | 3 | 2 | 1 | 3 | 0 |
| 3 | 2 | 1 | 0 | 3 | 1 | 0 | 2 | 3 | 0 | 2 | 1 |

## Mutually Orthogonal Latin Squares

## Questions:

Is there a collection of mutually orthogonal latin squares for every order?

If they exist, how big is the largest collection of mutually orthogonal latin squares for each order?

## Mutually Orthogonal Latin Squares

- Let $N(n)$ denote the size of the largest collection of mutually orthogonal latin squares (MOLS) of order $n$ (that exist).
$>$ Theorem 4. $N(n) \leq n-1$ for any $n \geq 2$.
$>$ Theorem 5. If $q$ is a prime power, then $N(q)=q-1$.
- $q=p^{r}$ where $p$ is prime number and $r \in N$
$>$ Theorem 6. $N(n) \geq 2$ for all $n$ except 2 and 6 .

$$
-N(2)=1 \text { and } N(6)=1
$$

$>$ Theorem 7. Let $n=q_{1}, \ldots, q_{r}$, where $q_{i}$ are distinct prime powers and $q_{1}<\ldots<q_{r}$. Then $N(n) \geq q_{1}-1$.

## Mutually Orthogonal Latin Squares

## Question:

Are there mutually orthogonal latin squares of order $n$ if $n$ is not a prime power?

## Research Questions

- What is the maximum $r_{t}$-orthogonality, $\mathrm{M}_{n}(t)$ ?
- Are there any properties related to $M_{n}(t)$ ?
- What is the frequency and the spectrum (for $r_{t}$-orthogonality) for sets of three or more latin squares of order $n$ ?

## RESULTS

| $t$ | $\mathrm{M}_{t}(6)$ |
| :---: | :---: |
| 2 | 34 |
| 3 | 96 |
| 4 | 188 |
| 5 | $300 \leq \mathrm{M}_{5}(6)<340$ |

Taken from R. Arce \& J. Cordova \& I. Rubio. (2009)

- We have tables with the spectrum for $n=4$ and 5 with $2 \leq t \leq n-1$ and for $n=6$ with $t=2$.
- We have tables with the frequency for $h_{2}(4), h_{3}(4), h_{2}(5)$, $h_{3}(5)$ and $h_{4}(5)$.

## Computational Problem

$>$ Reduce number of comparisons and time
$>$ Restrict focus to special sets of latin squares
> Eliminate unnecessary comparisons

## Computational Problem

- The plan:
-Distribute the work:
- Cores
- Processors
- Computers
-Design a specialized circuit that compares latin squares.

## What is Known

- Number of distinct latin squares when $n \leq 11$.
- Number of distinct reduced latin squares when $n \leq 11$.
- The spectrum for $r_{2}$-orthogonality and for $n=4$ and 5 with $2 \leq t \leq n-1$.
- The frequency for $h r_{2}(4), h r_{3}(4), h r_{2}(5), h r_{3}(5), h r_{4}(5)$ and $h r_{2}(6)$.
- If $n$ is a prime power and $t \leq n-1$, then

$$
\mathrm{M}_{t}(n)=n^{2}\binom{t}{2}
$$

- The number of latin squares of order $n=p^{r}$, where $p$ is a prime number and $r \in \mathrm{~N}$, that are mutually orthogonal.

## What is Unknown

- The number of distinct latin squares when $n \geq 12$.
- The number of distinct reduced latin squares when $n \geq 12$.
- The spectrum for $r_{t}$-orthogonality with $t>2$ and $n \geq 6$.
- The frequency for the $r_{t}$-orthogonality when $t>2$ and $n \geq 6$.
- The maximum $r_{t}$-orthogonality when $t=5$ and $n=6$
- The maximum $r_{t}$-orthogonality when $n$ is not a prime power and $2<t \leq n-1$.
- Mutually orthogonal latin squares of order $n$ when $n$ is not a prime power.

## FUTURE WORK

- Optimize the computing approach to apply it to the case $n=6$ because the time of computing the $\mathrm{M}_{3}(6)$ is 205.52541 years.
- Find properties of the latin squares that produce the $\mathrm{M}_{t}(n)$.
- Find a formula for $\mathrm{M}_{t}(n)$ when $n$ is not a prime power and $t \leq n-1$.
- Estimate the probability that two random latin squares of order $n$ are going to be mutually orthogonal.
